Lecture and discussion at bed side and operating theater every days for USG guided and Nerve stimulator guided regional anaesthesia. Practicing and hand on training for paediatric and neonatal anaesthesia for different surgery.

ADVANTAGE OF THE PROGRAM

- (a) It cover all field of paediatric and neonatal anaesthesia
- (b) Got international experience
- (c) Practice in different situation and different hospital
- (d) Hand on training for USG guided and nerve stimulator guided regional anaesthesia
- (e) Hand on training for USG guided central venous catheterization and arterial catheterization
- (f) Hand on training for endotracheal intubation and airway management in paediatric and neonate patients
- (g) Gained confidence to do paediatric and neonatal anaesthesia safely

RECOMMENDATION ON THE FELLOWSHIP PROGRAM

It is very effective and useful program. But the starting date was late for one month due to delay of registration from Medical Council of India. So I got only 5 months for training and it was very short time to be expert in paediatric anaesthesia. Fortunately, all of directors and consultants from CAS (Mumbai) trained me very well. When I got more time, I would be more expert in paediatric anaesthesia. I gained many experience and confidence from this training.

ACKNOWLEDGEMENT AND CONCLUSION

I would like to say thank you to President of WFSA, Aaliya Ahmed (programmes manager), Giselle de Castro (Administrative Officer) and CAS (mumbai) Team for giving me a chance to do this fellowship program and supporting me. Now my anaesthetist life and practice is incredible different due to this fellowship program. You all have changed and trained my whole aspect on my learning. I will always be grateful to you all for your support and kindness. I will continue my learning in paediatric anaesthesia to become a good and expert paediatric anaesthesiologist.
